

PCB Congeners by USEPA Method 1668A with HRGC/HRMS

Analysis for Polychlorinated Biphenyls (PCB) congeners shall be determined by USEPA Method 1668A or comparable method upon DEC EHL Project Manager approval. The cleanup techniques described in the method shall be employed as necessary to eliminate interferences and to obtain the lowest possible reporting limits. This should result in the minimum detection values listed, if not lower. Method 1668A requires a 5 point calibration range. If a PCB congener in a sample exceeds the calibration range the laboratory shall measure the undiluted extract and then dilute and re-analyze the extract to recover all the target compounds within the 5 point calibration range. Concentrations are in pg/g wet weight. RL is the minimum reporting limit.

Table 1: PCB Cogener and Mean Reporting Limit (RL) + Standard Deviation (SD)

| PCB Congener | Mean RL+2SD | PCB Congener | Mean RL+2SD | PCB Congener | Mean RL+2SD |
|--------------|-------------|--------------|-------------|----------------------|-------------|

Polybrominated Diphenyl Ethers by USEPA Method 1614

PBDEs shall be determined by USEPA Method 1614, “Brominated Diphenyl Ethers in Water Soil Sediment and Tissue by HRGC/HRMS” or a comparable method upon DEC EHL Project Manager approval. The data quality objectives of the project require that PBDE data be free of interference from other chlorinated and brominated substances. Sufficient cleanup during extraction shall be performed to remove these interfering substances prior to final analysis of the extracts.

Table 3: PBDE Congener and Mean Reporting Limit (RL) + Standard Deviation (SD)

| PBDE Congener | Mean RL+2SD | PBDE Congener | Mean RL+2SD |
|---------------|-------------|---------------|-------------|
| 7 | 0.66 | 85 | 2.1 |

Organochlorine Pesticides by USEPA Method 8081

Organochlorine pesticides shall be determined by USEPA Method 8081, "Organochlorine Pesticides by Gas Chromatography" or a comparable method upon DEC EHL Project Manager approval. The data quality objectives of the project require that the organochlorine pesticide data be free of interference from other chlorinated and brominated substances. Sample cleanup during extraction shall be performed to remove these interfering substances prior to final analysis of the extracts.

Table 5: Pesticides and Mean Reporting Limit (RL) + 2 Standard Deviations (SD)

| Pesticide | Mean RL+2SD |
|--------------------|-------------|
| Aldrin | 0.17 |
| Chlordane, cis- | 0.067 |
| Chlordane, oxy- | 1.1 |
| Chlordane, trans- | 0.058 |
| DDD, 2,4'- | 0.12 |
| DDD, 4,4'- | 0.22 |
| DDE, 2,4'- | 0.16 |
| DDE, 4,4'- | 0.21 |
| DDT, 2,4'- | 0.2 |
| DDT, 4,4'- | 0.22 |
| Dieldrin | 0.14 |
| Endosulfan Sulfate | 0.17 |
| Endosulfan, alpha- | 0.11 |
| Endosulfan, beta- | 0.14 |
| Endrin | 0.18 |
| Endrin Ketone | 0.15 |
| HCH, alpha | 0.2 |
| HCH, beta | 0.38 |
| HCH, delta | 0.28 |
| HCH, gamma | 0.27 |
| Heptachlor | 0.27 |
| Heptachlor Epoxide | 0.2 |
| Hexachlorobenzene | 0.059 |
| Methoxychlor | 0.39 |
| Mirex | 0.12 |
| Nonachlor, cis- | 0.15 |
| Nonachlor, trans- | 0.14 |
| Total Toxaphene | 60 |

Concentrations are in nanogram/gram (ng/g) wet weight

RL: Reporting Limit is the minimum reporting limit

Perfluorinated Compounds

Perfluorinated Compounds (PFCs) shall be analyzed by a method chosen by the contract lab upon DEC EHL Project Manager approval. The method shall be described, with Proof of Validation. Cleanup techniques shall be employed to eliminate interferences and to obtain the lowest possible reporting limits. This should result in the minimum detection values listed, if not lower.

Table 6: Perfluorinated Compounds and Mean Reporting Limit (RL) + 2 Standard Deviations (SD)

| Perfluorinated Compounds | Mean RL + 2SD |
|---------------------------------|----------------------|
| PFBA | 2.6 |
| PFBS | 5.1 |
| PFDA | 2.6 |
| PFDoA | 2.6 |
| PFHpA | 2.6 |
| PFHxA | 2.6 |
| PFHxS | 5.1 |
| PFNA | 2.6 |
| PFOA | 2.6 |
| PFOS | 5.1 |
| PFOSA | 2.6 |

| PFUnA | 2.6 |

RL: Reporting Limit

Reporting Limit calculated as the current average reporting limit plus 2 standard deviations
 Concentrations in pictogram/gram (pg/g) wet weight.

Pharmaceuticals and Personal Care Products by USEPA Method 1694

Pharmaceuticals and Personal Care Products (PPCP) shall be determined by EPA Method 1694 or a comparable method upon DEC EHL Project Manager approval. Any modifications shall be clarified with Proof of Validation. The cleanup techniques described in the method shall be employed to eliminate interferences and to obtain the lowest possible reporting limits. This should result in the minimum detection values listed, if not lower.

Table 7: Pharmaceuticals and Personal Care Products and Mean Reporting Limit + 2 Standard Deviations (SD)

| Product | Mean RL + 2SD | Product | Mean RL + 2SD | Product | Mean RL + 2SD |
|-------------------------------|---------------|------------------------|---------------|-----------------------|---------------|
| 1,7-Dimethylxanthine | 69 | Desmethyldiltiazem | 0.17 | Oxolinic Acid | 1.2 |
