1. BID SCHEDULE INTENT:

- A. To establish an annual cost to provide all labor, tools and materials to perform **ROUTINE SCHEDULED SERVICES** described below for entire growing season (generally defined as the period **between April 15th through October 15th of each year**) for the grounds described in the Supplemental Conditions.
- B. To provide an **HOURLY LABOR COST** to perform landscape services other than routine schedule services described below.

2. ROUTINE SCHEDULED SERVICES:

- A. Times of Work - Dethatching of lawn areas, reseeding of bare patches, watering and pruning of trees and shrubs must be performed during each plant's appropriate gardening season and hours of the day to the benefit of each plant. The Local Court Contact may assign additional work.
 - 1). **Early Spring clean up** - should include a light raking and pick-up of debris and major corrective pruning to correct limbs entangled in iron tree guards and damaged by snow, wind, and vandalism. Remove guy wires and hose clamps from trees whose roots are established.
 - 2). **De-thatch and aerate lawns** - in the **Spring** after ground has dried out, grass has greened up and prior to application of fertilizers. De-thatch only if thatch is greater than ½" thick. Samples may be taken to Cooperative Extension Service to determine if de-thatching and/or aeration are necessary.
 - 3). **Reseeding** – Contractor shall prep and reseed dead or thin grass patches with the seed mixture originally placed: 5% rye, 30% Kentucky Bluegrass-Nugget, 25% Kentucky Bluegrass-Merion and 40% Boreal Fescue.
 - 4). **Pruning/Weeding** – Contractor shall prune trees and shrubs in the **Spring** and when needed. Prune to remove dead branches and maintain an appropriate and pleasant appearance of the plant as approved by the Contract Manager. All beds and lawns shall be kept free of weeds. Applications of an appropriate biodegradable herbicide shall control weed growth in the bed and lawns.
 - 5). **Fertilize Trees and Shrubs**– In the **Spring**, apply a liquid 15/30/15 fertilizer via a root feeding process. If a dry fertilizer is used, it shall be 8/32/16 applied 2-4 lbs. per 100 sf.
 - 6). **Fertilize Lawn** – In the **Spring**, upon completion of de-thatching, apply dry 16/16/16 or 8/32/16 fertilizer to lawn areas at a rate of 12 lbs. per 1,000sf. Again at **mid-season** (no later than August 1st) apply 16/16/16 or 8/32/16 fertilizer at a rate of 6-7 lbs. per 1000sf.
 - 7). **Watering** – This shall include the surface watering of lawns in order to ensure no wilting or browning of the lawn and deep watering of trees and surface watering plant basins. All Hose Bibs are identified on the Site Plans. Building Maintenance staff will turn water to hose bibs off/on per request and as weather permits.
 - (a) Keep trees/shrubs well watered. Especially in the spring when coming out of dormancy to prevent disease and pest infestation. Regular and deep watering is required rather than frequent and light watering.
 - (b) "Slow" watering is required for those trees/shrubs without a saucer to hold water and those found on slopes, mounds and under larger trees. Soaker hoses allow water to seep slowly into the soil. Spruce trees require deep watering to assist in continued effort to establish viable root systems.
 - (c) Occasionally hose down leaves and limbs with pressure from a garden hose nozzle to dislodge pests and their eggs. This is especially useful for aphids.
 - (d) Trees in sidewalk grates and shrubs in concrete planters require a thorough watering every 2 weeks throughout contract. Trees in sidewalk grates must always be hand watered deeply.
 - 8). **Mowing Lawns** – This shall be performed when grass approaches a maximum 3" height. Mow to a height of 2". Lawn edges must be kept neat and trim. All grass clippings (if mulching type mower was not used) shall be collected and removed from the property.
 - 9). **Raking and Fall Clean Up** - once leaves have fallen, all landscaped areas shall be raked to be free and clear of leaves and debris. This will assist in minimizing impact of Birch Leaf Miners.
 - 10). **Lime Lawn** – In the **Fall**, after having soil tested and prior to the ground freezing, apply lime at the rate per 1,000sf recommended from the test when pH is lower than 6.0.
 - 11). **Pest Control** – weekly inspect all landscaped areas for signs of disease or pests and report their findings to the Local Contact. A timely application of Safer Soap according to manufacturer's direction may help control the aphids. If remedy is not known, take sample to Cooperative Extension Service for analysis and treatment recommendation. Contractor's are responsible for obtaining all permits,
