## **Executive Summary**

The National EMS Education Standards (the Standards) represent another step toward realizing the vision of the 1996 EMS Agenda for the Future, as articulated in the 2000 EMS Education Agenda for the Future: A Systems Approach.

The National EMS Education Standards outline the minimal terminal objectives for entry-level EMS personnel to achieve within the parameters outlined in the National EMS Scope of Practice Model. Although educational programs must adhere to the Standards, its format will allow diverse implementation methods to meet local needs and evolving educational practices. The less prescriptive format of the Standards will also allow for ongoing revision of content consistent with scientific evidence and community standards of care.

In implementing the *Standards*, EMS instructors and educational programs will have the freedom to develop their own curricula or use any of the wide variety of publishers' lesson plans and instructional resources that are available at each licensure level.

Consistent with the EMS Education Agenda, EMS accreditation authorities will use the *Standards* as the framework for evaluation of program curricula.

The *National EMS Education Standards* are not a stand-alone document. EMS education programs will incorporate each element of the education system proposed in the *Education Agenda*. These elements include:

- National EMS Core Content
- National EMS Scope of Practice
- National EMS Education Standards
- National EMS Certification
- National EMS Program Accreditation

This integrated system is essential to achieving the goals of program efficiency, consistency of instructional quality, and student competence as outlined in the *Education Agenda*.

### Introduction

As a profession, EMS is still in its early developmental stages. The formal progression of an organized civilian EMS system began in the 1960s and continues to evolve as we further define and enhance our structure, oversight, and organization.

As EMS system operations have developed, so has EMS education. In the early 1970s, registered nurses and physicians taught most EMS programs. Few student and instructor resources related directly to prehospital emergency care. No standards existed to define practice and there was no clear delineation of scopes of practice in EMS.

## **Historical Development of EMS in the United States**

Table 1 outlines key events in the development of EMS in the United States from the 1950s to the present.

		Development of EMS
Year	Event/Organization	Result
1950s	American College of Surgeons	Developed the first training program for ambulance attendants
1960	President's Committee for Traffic Safety	Recognized the need to address "Health, Medical Care and Transportation of the Injured" to reduce traffic fatalities
1966	National Academy of Science published Accidental Death and Disability: The Neglected Disease of Modern Society (The White Paper)	Quantified the scope of traffic-related death in the United States  Described the deficiencies in prehospital care in this country, including:  Call for ambulance standards  State-level policies and regulations  Recommendation to adopt methods for providing consistent ambulance services at the local level
1966	Highway Safety Act of 1966	Required each State to adopt highway safety programs to comply with Federal standards (including "emergency services") Impetus for NHTSA leadership in EMS:  Directed writing of National Standard Curricula Provided funding to States to develop State EMS Offices  Took leadership role in EMS system development, including developing model EMS State legislation
1970s	Robert Wood Johnson Foundation and Federal Government	Funded regional EMS systems and demonstration projects
1970s	Crash Injury Management for the Law Enforcement Officer published by NHTSA	40-hour program that evolved into First Responder: NSC in 1979
1970	National Registry of EMTs (NREMT)	Held first board meeting, with goal to provide uniform standards for credentialing ambulance attendants.

	Table 1: Historical	<b>Development of EMS</b>
Year	Event/Organization	Result
1971	Emergency Care and Transportation of the Sick and Injured published by the American Academy of Orthopedic Surgeons (AAOS)	One of the first EMS textbooks
1973	Emergency Medical Services Act of 1973 enacted by Congress as Title XII of the Public Health Services Act	Over \$300 million in funding for EMS over 8 years:  Allowed for EMS system planning and implementation Required States to focus on EMS personnel and training Resulted in legislation and regulation of EMS personnel levels
1975	American Medical Association (AMA)	Recognized EMT-Paramedic as an allied health occupation
1977	National Standard Curriculum for EMT- Paramedic published by NHTSA	15 instructional modules
1978	The Essentials for Paramedic Program Accreditation developed by AMA	Joint Review Committee on Education Programs for the EMT-Paramedic (JRCEMT-P) adopted <i>The Essentials</i> as the standard for accreditation
1985	First Responder, EMT- Ambulance, EMT- Intermediate, and EMT- Paramedic: NSC revised by NHTSA	EMT-Paramedic reformatted into six divisions
1990	NHTSA hosts EMS Training Workshop	This workshop facilitated the development of the 1990s curricula and introduced the assessment based education concept
1992	EMS Education and Practice Blueprint.	This document served as a template for the revised format of the 1990s NSC revision projects
1992	Initiated EMS Agenda for the Future	Funded by NHTSA, Maternal and Child Health Bureau (MCHB), and Health Resources and Services Administration (HRSA)

	Table 1: Historical	<b>Development of EMS</b>
Year	Event/Organization	Result
1994	NREMT Practice Analysis	Conducted practice analysis of EMTs and paramedics:  Determined importance of EMS actions based on assessment of frequency and potential for harm Provided foundation for NREMT test blueprint
1994	EMT-Ambulance revised and renamed EMT-Basic: NSC	
1995	First Responder: NSC is revised	
1996	EMS Agenda for the Future is created by the National Association of EMS Physicians and National Association of State EMS Directors	Vision statement for integration of EMS into the health care system and funded by NHTSA and Health Resources and Services Administration (HRSA), Maternal and Child Health Bureau (MCHB), EMSC Program
1998	PEW Health Professions Commission Taskforce on Health Care Workforce Regulation published Strengthening Consumer Protection: Priorities for Health Care Workforce Regulation	Recommended:  National Policy Advisory Board to establish standards and model legislative language for uniform scope of practice authority for health professions  Emphasis on States' responsibility to enact uniform scope of practice consistent with the recommendations of the National Policy Advisory Board.
1998	EMT-Paramedic: NSC revised	
1999	EMT-Intermediate: NSC revised	
2000	Education Agenda for the Future: A Systems Approach published by NHTSA	Funded by NHTSA and HRSA. Designed to develop an integrated system of EMS regulation, certification, and licensure
2004	2004 National EMS Practice Analysis published by NREMT	Updates the 1994 Practice Analysis
2005	National EMS Core Content published by NHTSA and HRSA	Defines:  Domain of knowledge of EMS personnel described within the <i>National EMS Scope of Practice</i> Universal knowledge and skills of EMS personnel

	Table 1: Historical	<b>Development of EMS</b>
Year	Event/Organization	Result
2005	The State of EMS Education EMS Research Project: Characteristics of EMS Educators by Ruple et al. In Prehospital Emergency Care	Research related to:  Identifying characteristics of EMS instructors  Describing infrastructure available to instructors  Identifying instructor attributes necessary for implementing education standards
2006	EMS at the Crossroads Institute of Medicine Report	Recommendations related to EMS Education  Agenda:  State governments should adopt a common scope of practice for EMS personnel, with State licensing reciprocity  States should require national accreditation of paramedic programs  States should accept national certification as a prerequisite for State licensure and local credentialing of EMS providers
2007	National EMS Scope of Practice published by NHTSA	National guideline to define levels of EMS licensure:  Guide State legislation Promote reciprocity between States Clarify EMS roles for the community

In August 1996, the *EMS Agenda for the Future* (the *Agenda*) was published. This consensus document was developed with funding from the National Highway Traffic Safety Administration and the Health Resources and Services Administration. The National Association of EMS Physicians and the National Association of State EMS Directors led this process, which involved many stakeholders.

The Agenda document was designed to guide government and private organizations in EMS planning, development, and policy-making at the national, State, and local levels. It addressed 14 attributes of EMS, including the EMS education system. The Agenda defined a vision for the future of EMS education that "employs sound educational principles," "based on research," and "conducted by qualified instructors." In December of that year, representatives of 30 EMS-related organizations met at an EMS Education Conference sponsored by NHTSA to identify the necessary steps for implementing that vision.

The outcome of the EMS Education Conference was summarized in the EMS Education Agenda for the Future: A Systems Approach. This document included the following recommendations:

• The National EMS Education and Practice Blueprint (the Blueprint) is a valuable component of the EMS education system. A multidisciplinary panel, led by NHTSA, to more explicitly identify core educational content for each licensure level, should revise it.

- National EMS education standards are necessary, but need not include specific declarative material or lesson plans. NHTSA should support and facilitate the development of national EMS education standards.
- The *Blueprint* and national EMS education standards should be revised periodically, with major revisions occurring every 5 to 7 years, and minor updates made every 2 to 3 years.

In 1998, NHTSA convened a Blueprint Modeling Group to revise the *Blueprint*. That group determined that the *Blueprint* represented only one component of a comprehensive EMS education system, so it redefined its mission, and the group was renamed the EMS Education Task Force. The Task Force produced a document titled the *EMS Education Agenda for the Future: A Systems Approach* (the *Education Agenda*).

The EMS education system envisioned in the EMS Agenda for the Future was further defined and articulated into the model shown in Figure 1 in the Education Agenda. This document states that, to be most effective, each component in the EMS education system should be structured, coordinated, and interdependent.

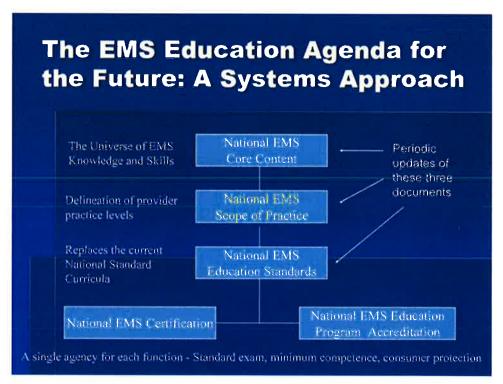

Figure 1: Model EMS System

The *National EMS Core Content* was published in 2005. Core Content defines the entire domain of out-of-hospital practice and identifies the universal body of knowledge and skills for EMS providers who do not function as independent practitioners. Funded by NHTSA and HRSA, this project was led by the National Association of EMS Physicians and the American College of Emergency Physicians.

The National EMS Scope of Practice Model (Scope of Practice) is a consensus document that was published in 2006. This document defines the levels of EMS personnel and delineates the practices and minimum competencies for each level of EMS personnel. The Scope of Practice does not have regulatory authority, but provides guidance to States. Adherence to the Scope of Practice would increase uniformity in EMS practice throughout this country and facilitate reciprocity between States. Leadership for this project was delegated to the National Association of State EMS Officials and funded by NHTSA and HRSA.

The Scope of Practice describes four levels of EMS personnel licensure: Emergency Medical Responder (EMR), Emergency Medical Technician (EMT), Advanced Emergency Medical Technician (AEMT), and Paramedic. The Scope of Practice further defines practice, suggests minimum educational preparation, and designates appropriate psychomotor skills at each level of licensure. Further, the document describes each level of licensure as distinct and distinguished by unique "skills, practice environment, knowledge, qualifications, services provided, risk, level of supervisory responsibility, and amount of autonomy and judgment/critical thinking/decision-making."

The *National EMS Education Standards*, led by the National Association of EMS Educators, replace the NHTSA National Standard Curricula at all licensure levels. The *Standards* define the competencies, clinical behaviors, and judgments that must be met by entry-level EMS personnel to meet practice guidelines defined in the *National EMS Scope of Practice Model*. Content and concepts defined in the *National EMS Core Content* are also integrated within the *Standards*.

National EMS Certification and National EMS Education Program Accreditation are the "bookends" that support the other key elements of the system. The Education Agenda recommends an individual must graduate from a nationally accredited EMS education program to be eligible for National EMS Certification. This recommendation was also supported by the Institute of Medicine report, *The Future of Emergency Care: EMS at the Crossroads*. Essential components of the EMS Agenda include a single National EMS Accreditation Agency and a single National EMS Certification Agency to ensure consistency and quality of EMS personnel.

### The National EMS Education Standards

The National EMS Education Standards comprise four components (Table 2):

- 1. Competency (designated in yellow) This statement represents the minimum competency required for entry-level personnel at each licensure level.
- 2. Knowledge Required to Achieve Competency (designated in blue) This represents an elaboration of the knowledge within each competency (when appropriate) that entry-level personnel would need to master in order to achieve competency.
- 3. Clinical Behaviors/Judgments (designated in green) This section describes the clinical behaviors and judgments essential for entry-level EMS personnel at each licensure level.
- 4. Educational Infrastructure (designated in white) This section describes the support standards necessary for conducting EMS training programs at each licensure level.

Table	2: Format of N	National EMS F	Education Stand	dards
	EMR	ЕМТ	AEMT	Paramedic
Content Area	Competency	Competency	Competency	Competency
Elaboration of Knowledge	Additional knowledge related to the competency	Additional knowledge related to the competency	Additional knowledge related to the competency	Additional knowledge related to the competency
	Clinical behaviors and judgments	Clinical behaviors and judgments	Clinical behaviors and judgments	Clinical behaviors and judgments
	Educational Infrastructure	Educational Infrastructure	Educational Infrastructure	Educational Infrastructure

Each statement in the *Standards* presumes that the expected knowledge and behaviors are within the scope of practice for that EMS licensure level, as defined by the *National EMS Scope of Practice Model*. Each competency applies to patients of all ages, unless a specific age group is identified.

The *Standards* also assume there is a progression in practice from the Emergency Medical Responder level to the Paramedic level. That is, licensed personnel at each level are responsible for all knowledge, judgments, and behaviors at their level and at all levels preceding their level. For example, a Paramedic is responsible for knowing and doing everything identified in that specific area, as well as knowing and doing all tasks in the three preceding levels.

The descriptors used to illustrate the increasing complexity of knowledge and behaviors through the progression of licensure levels originate, in part, from the *National EMS Scope of Practice Model*. These terms reflect the differences in the breadth, depth, and actions required at each licensure level (Figure 2).

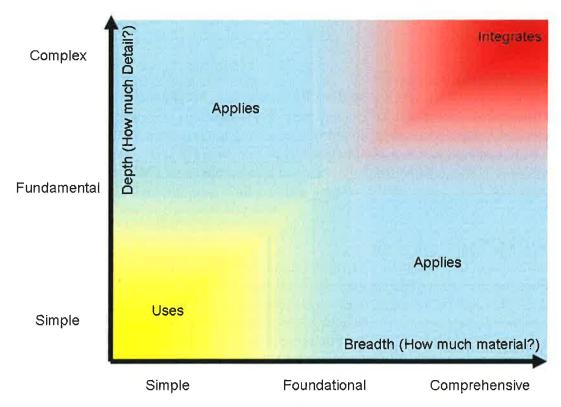

Figure 2: Terminology Graph

The *depth* of knowledge is the amount of detail a student needs to know about a particular topic. The *breadth* of knowledge refers to the number of topics or issues a student needs to learn in a particular competency. For example, the Emergency Medical Responder needs to have a thorough understanding (depth) about how to safely and effectively use the bag valve mask; however, the EMR is taught a limited number of concepts (breadth) surrounding management of a patient's airway.

To describe the intended depth of knowledge of a particular concept within a provider level, the Project Team uses the terms *simple*, *fundamental*, and *complex*. This terminology better illustrates the progression of the depth of knowledge from one particular level to another. For example, the EMR's *depth* of knowledge for bleeding control is simple while the EMT's *depth* of knowledge for bleeding control is fundamental.

To describe the intended breadth of knowledge of a concept within a provider level, the project team uses the terms *simple*, *foundational*, and *comprehensive*. This terminology also better illustrates the progression of the breadth of knowledge from one particular level to another. For example, the EMT's breadth of knowledge for cardiovascular disorders is foundational while the Paramedic's *breadth* of knowledge for cardiovascular disorders is comprehensive.

# From the National EMS Scope of Practice Model: EMS Personnel Licensure Levels

### Emergency Medical Responder

The primary focus of the Emergency Medical Responder is to initiate immediate lifesaving care to critical patients who access the emergency medical system. This individual possesses the basic knowledge and skills necessary to provide lifesaving interventions while awaiting additional EMS response and to assist higher level personnel at the scene and during transport. Emergency Medical Responders function as part of a comprehensive EMS response, under medical oversight. Emergency Medical Responders perform basic interventions with minimal equipment.

### Emergency Medical Technician

The primary focus of the Emergency Medical Technician is to provide basic emergency medical care and transportation for critical and emergent patients who access the emergency medical system. This individual possesses the basic knowledge and skills necessary to provide patient care and transportation. Emergency Medical Technicians function as part of a comprehensive EMS response, under medical oversight. Emergency Medical Technicians perform interventions with the basic equipment typically found on an ambulance. The Emergency Medical Technician is a link from the scene to the emergency health care system.

### Advanced Emergency Medical Technician

The primary focus of the Advanced Emergency Medical Technician is to provide basic and limited advanced emergency medical care and transportation for critical and emergent patients who access the emergency medical system. This individual possesses the basic knowledge and skills necessary to provide patient care and transportation. Advanced Emergency Medical Technicians function as part of a comprehensive EMS response, under medical oversight. Advanced Emergency Medical Technicians perform interventions with the basic and advanced equipment typically found on an ambulance. The Advanced Emergency Medical Technician is a link from the scene to the emergency health care system.

#### **Paramedic**

The Paramedic is an allied health professional whose primary focus is to provide advanced emergency medical care for critical and emergent patients who access the emergency medical system. This individual possesses the complex knowledge and skills necessary to provide patient care and transportation. Paramedics function as part of a comprehensive EMS response, under medical oversight. Paramedics perform interventions with the basic and advanced equipment typically found on an ambulance. The Paramedic is a link from the scene into the health care system.

Each educational level assumes mastery of previously stated competencies. Each individual must demonstrate each competency within his or her scope of practice and for patients of all ages.

	EMR	EMT	AEMT	Paramedic
Preparatory	Uses simple knowledge of the EMS system, safety/well-being of the EMR, medical/legal issues at the scene of an emergency while awaiting a higher level of care.	Applies fundamental knowledge of the EMS system, safety/well-being of the EMT, medical/legal and ethical issues to the provision of emergency care.	Applies fundamental knowledge of the EMS system, safety/well-being of the AEMT, medical/legal and ethical issues to the provision of emergency care.	Integrates comprehensive knowledge of EMS systems, the safety/well-being of the paramedic, and medical/legal and ethical issues which is intended to improve the health of EMS personnel, patients, and the community.
EMS Systems	Simple depth, simple breadth  • EMS systems  • Roles/ responsibilities/ professionalism of EMS personnel  • Quality improvement	EMR Material PLUS: Simple depth, foundational breadth  • EMS systems  • History of EMS  • Roles/ responsibilities/ professionalism of EMS personnel  • Quality improvement  • Patient safety	EMT Material PLUS: Fundamental depth, foundational breadth • Quality improvement • Patient safety	AEMT Material PLUS: Fundamental depth, foundational breadth • History of EMS  Complex depth, comprehensive breadth • EMS systems • Roles/ responsibilities/ professionalism of EMS personnel • Quality improvement

	EMR	EMT	AEMT	Paramedic
Assessment	Use scene information and simple patient assessment findings to identify and manage immediate life threats and injuries within the scope of practice of the EMR.	Applies scene information and patient assessment findings (scene size up, primary and secondary assessment, patient history, and reassessment) to guide emergency management.	Same as Previous Level	Integrate scene and patient assessment findings with knowledge of epidemiology and pathophysiology to form a field impression. This includes developing a list of differential diagnoses through clinical reasoning to modify the assessment and formulate a treatment plan.
Scene Size-Up	Complex depth, comprehensive breadth  • Scene safety  Fundamental depth, foundational breadth  • Scene management  ○ Impact of the environment on patient care  ○ Addressing hazards  ○ Violence  ○ Violence  ○ Need for additional or specialized resources  ○ Standard precautions	EMR Material PLUS: Fundamental depth, foundational breadth  Scene management  Multiple patient situations	Same as Previous Level	AEMT Material PLUS: Complex depth, comprehensive breadth  • Scene management  o Impact of the environment on patient care  o Addressing hazards  o Violence  o Multiple patient situations

	EMR	EMT	AEMT	Paramedic
Primary Assessment	Simple depth, simple breadth  Primary assessment for all patient situations  Level of consciousness  ABCs  ABCs  Assessment of vital functions  Begin interventions needed to preserve life	EMR Material PLUS: Fundamental depth, simple breadth  • Primary assessment for all patient situations  • Initial general impression  • Level of consciousness  • ABCs  • Identifying life threats  • Assessment of vital functions  • Integration of treatment/ procedures needed to preserve life	EMT Material PLUS: Fundamental depth, foundational breadth • Primary assessment for all patient situations ○ Initial general impression ○ Level of consciousness ○ ABCs ○ Identifying life threats ○ Assessment of vital functions • Integration of treatment/ procedures needed to preserve life	AEMT Material PLUS: Complex depth, comprehensive breadth  • Primary assessment for all patient situations  ○ Initial general impression  ○ Level of consciousness  ○ ABCs  ○ Identifying life threats  ○ Assessment of vital functions  • Integration of treatment/procedures needed to preserve life
History Taking	Simple depth, simple breadth  • Determining the chief complaint • Mechanism of injury/nature of illness • Associated signs and symptoms	EMR Material PLUS: Fundamental depth, foundational breadth • Investigation of the chief complaint • Mechanism of injury/nature of illness • Past medical history • Associated signs and symptoms • Pertinent negatives	Same as Previous Level	AEMT Material PLUS: Complex depth, comprehensive breadth  • Components of the patient history  • Interviewing techniques  • How to integrate therapeutic communication techniques and adapt the line of inquiry based on findings and presentation
Secondary Assessment	Simple depth, simple breadth  • Performing a rapid full body scan  • Focused assessment of pain  • Assessment of vital signs	EMR Material PLUS: Fundamental depth, foundational breadth  Techniques of physical examination  Respiratory system  Presence of breath sounds  Cardiovascular system Neurological system  Musculoskeletal system  Musculoskeletal system  All anatomical regions	EMT Material PLUS: Complex depth, foundational breadth Assessment of • Lung sounds	AEMT Material PLUS: Complex depth, comprehensive breadth Techniques of physical examination for all major • Body systems • Anatomical regions

	EMR	EMT	AEMT	Paramedic
Monitoring Devices	No knowledge related to this competency is applicable at this level.	Simple depth, simple breadth Within the scope of practice of the EMT  • Obtaining and using information from patient monitoring devices including (but not limited to)  ○ Pulse oximetry  ○ Non-invasive blood pressure	EMT Material PLUS: Within the scope of practice of the AEMT Simple depth, simple breadth  • Obtaining and using information from patient monitoring devices including (but not limited to)  o Blood glucose determination	AEMT Material PLUS: Fundamental depth, foundational breadth Within the scope of practice of the paramedic  • Obtaining and using information from patient monitoring devices including (but not limited to):  ○ Continuous ECG monitoring ○ 12 lead ECG interpretation ○ Carbon dioxide monitoring ○ Carbon dioxide continuous
Reassessment	Simple depth, simple breadth  • How and when to reassess patients	EMR Material PLUS: Fundamental depth, foundational breadth • how and when to perform a reassessment for all patient situations	Same as Previous Levels	AEMT Material PLUS: Complex depth, comprehensive breadth • How and when to perform a reassessment for all patient situations

	EMR	EMT	AEMT	Paramedic
Medicine	Recognizes and manages life threats based on assessment findings of a patient with a medical emergency while awaiting additional emergency response.	Applies fundamental knowledge to provide basic emergency care and transportation based on assessment findings for an acutely ill patient.	Applies fundamental knowledge to provide basic and selected advanced emergency care and transportation based on assessment findings for an acutely ill patient.	Integrates assessment findings with principles of epidemiology and pathophysiology to formulate a field impression and implement a comprehensive treatment/disposition plan for a patient with a medical complaint.
Medical Overview	Simple depth, simple breadth Assessment and management of a  • Medical complaint	EMR Material PLUS: Simple depth, foundational breadth Pathophysiology, assessment, and management of a medical complaints to include Transport mode	EMT Material PLUS: Fundamental depth, foundational breadth Pathophysiology, assessment, and management of a medical complaints to include  Transport mode  Destination decisions	AEMT Material PLUS: Complex depth, comprehensive breadth Pathophysiology, assessment, and management of medical complaints to include • Transport mode

		Viral respiratory infections		

	EMR	EMT	AEMT	Paramedic
Hematology	No knowledge related to this competency is applicable at this level.	Simple depth, simple breadth Anatomy, physiology, pathophysiology, assessment, and management of  • Sickle cell crisis • Clotting disorders	EMT Material PLUS: Fundamental depth, foundational breadth Anatomy, physiology, pathophysiology, assessment and management of  • Sickle cell crisis	AEMT Material PLUS: Anatomy, physiology, epidemiology, pathophysiology, psychosocial impact, presentations, prognosis, and management of common or major hematological diseases and/or emergencies. Complex depth, foundational breadth  Sickle cell disease Fundamental depth, foundational counditional breadth  Blood transfusion  Hemostatic disorders  Hemostatic disorders  Red blood cell disorders  White blood cell disorders  Coagulopathies

Paramedic	AEMT Material Plus: Anatomy, physiology, epidemiology, pathophysiology, psycuosociai impaci, presentations, prognosis, and management of Complex depth, comprehensive breadth  • Complications of o Acute renal failure  o Chronic renal failure  o Chronic renal failure  he Acute renal failure  Acute renal failure  o Acute renal failure  o Acute renal failure  o Hudamental depth, foundational breadth  • Acid base disturbances  • Fluid and electrolyte  • Infection  • Male genital tract conditions
AEMT	EMT Material PLUS: Fundamental depth, simple breadth Anatomy, physiology, pathophysiology, assessment, and management of • Complications related to renal dialysis • Kidney stones
EMT	EMR Material PLUS: Simple depth, simple breadth Anatomy, physiology, pathophysiology, assessment, and management of • Complications related to o Renal dialysis o Urinary catheter management (not insertion) • Kidney stones
EMR	Simple depth, simple breadth  Blood pressure assessment in hemodialysis patients
	Genitourinary/Renal

Paramedic	AEMT Material Plus: Anatomy, physiology, epidemiology, presentations, prognosis, and management of common or major gynecological diseases and/or emergencies Complex depth, comprehensive breadth  • Vaginal bleeding  • Sexual assault Fundamental depth, foundational breadth  • Infections  • Pelvic Inflammatory Disease  • Ovarian eysts  • Dysfunctional uterine bleeding  • Vaginal foreign body	AEMT Material Plus: Fundamental depth, foundation breadth Anatomy, physiology, epidemiology, pathophysiology, psychosocial impact, presentations, prognosis, and management of common or major non-traumatic musculoskeletal disorders  • Disorders of the spine  • Joint abnormalities  • Muscle abnormalities
AEMT	Same as Previous Level	Same as Previous Level
EMT	EMR Material Plus: Anatomy, physiology, assessment findings, and management of unuangement of  unuangement of  voundational breadth  • Vaginal bleeding  • Sexual assault (to include appropriate emotional support)  Simple depth, simple breadth  • Infections	Fundamental depth, foundational breadth Anatomy, physiology, pathophysiology, assessment and management of  Non-traumatic fractures
EMR	Simple depth, simple breadth Recognition and management of shock associated with  Vaginal bleeding	No knowledge related to this competency is applicable at this level.
	Gynecology	Non-Traumatic Musculoskeletal Disorders

	EMR	EMT	AEMT	Paramedic
	Simple depth, simple breadth	Same as Previous Level	Same as Previous Level	AEMT Material Plus:
	Recognition and management of			Fundamental depth, foundational breadth
Diseases of the	Nose bleed			Knowledge of anatomy, physiology, epidemiology,
Eyes, Ears, Nose, and Throat				pathophysiology, psychosocial impact, presentations,
A STATE OF THE STA				prognosis, management of
				Common or major diseases of the eves ears nose and
				throat, including nose bleed

100	EMR	EMT	AEMT	Paramedic
Shock and Resuscitation	Uses assessment information to recognize shock, respiratory failure or arrest based on assessment findings and manages the emergency while awaiting additional emergency response.  Applies fundamental knowledge of the causes, pathophysiology, and management of shock, respiratory failure or arrest, additional emergency management.	Applies fundamental knowledge of the causes, pathophysiology, and management of shock, respiratory failure or arrest, cardiac failure or arrest, and post resuscitation management.	Applies fundamental knowledge to provide basic and selected advanced emergency care and transportation based on assessment findings for a patient in shock, respiratory failure or arrest, cardiac failure or arrest, and post resuscitation management.	Integrates comprehensive knowledge of causes and pathophysiology into the management of cardiac arrest and peri-arrest states.  Integrates a comprehensive knowledge of the causes and pathophysiology into the management of shock, respiratory failure or arrest with an emphasis on early intervention to prevent arrest.

	EMR	EMT	AEMT	Paramedic
Trauma	Uses simple knowledge to recognize and manage life threats based on assessment findings for an acutely injured patient while awaiting additional emergency medical response.	Applies fundamental knowledge to provide basic emergency care and transportation based on assessment findings for an acutely injured patient.	Applies fundamental knowledge to provide basic and selected advanced emergency care and transportation based on assessment findings for an acutely injured patient.	Integrates assessment findings with principles of epidemiology and pathophysiology to formulate a field impression to implement a comprehensive treatment/disposition plan for an acutely injured patient.
Trauma Overview	No knowledge related to this competency is applicable at this level.	Fundamental depth, foundational breadth Pathophysiology, assessment, and management of the trauma patient • Trauma scoring • Rapid transport and destination issues • Transport mode	Same as Previous Level	AEMT Material Plus: Complex depth, comprehensive breadth Pathophysiology, assessment and management of the trauma patient  Trauma scoring  Transport and destination issues
Bleeding	Simple depth, simple breadth  Recognition and management of foundational breadth  Bleeding  Pathophysiology, as and management of  Bleeding	EMR Material Plus: Fundamental depth, foundational breadth Pathophysiology, assessment, and management of • Bleeding	EMT Material Plus: Complex depth, comprehensive breadth • Fluid resuscitation	AEMT Material Plus: Complex depth, comprehensive breadth Pathophysiology, assessment, and management of • Bleeding

	EMR	EMT	AEMT	Paramedic
Chest Trauma	Simple depth, simple breadth Recognition and management of  Blunt versus penetrating mechanisms  Open chest wound  Impaled object	Fundamental depth, simple breadth Pathophysiology, assessment and management  Blunt versus penetrating mechanisms  Hemothorax  Open  Simple  Tension  Cardiac tamponade  Rib fractures  Flail chest  Commotio cordis	EMT Material Plus: Fundamental depth, foundational breadth Pathophysiology, assessment and management of  Traumatic aortic disruption  Pulmonary contusion  Blunt cardiac injury  Hemothorax  Open  Cardiac tamponade  Rib fractures  Flail chest  Commotio cordis  Flail chest  Commotio cordis  Traumatic asphyxia	AEMT Material Plus: Complex depth, comprehensive breadth Pathophysiology, assessment, and management of Traumatic aortic disruption Pulmonary contusion Blunt cardiac injury Hemothorax O Open Cardiac tamponade Rib fractures Rib fractures Flail chest Commotio cordis Tracheobronchial disruption Diaphragmatic rupture Traumatic asphyxia

	EMR	EMT	AEMT	Paramedic
Abdominal and Genitourinary Trauma	Simple depth, simple breadth Recognition and management of Blunt versus penetrating mechanisms Evisceration Impaled object	FMR Material Plus: Fundamental depth, simple breadth Pathophysiology, assessment and management of Solid and hollow organ injuries Blunt versus penetrating mechanisms Injuries to the external genitalia Vaginal bleeding due to trauma Sexual assault	EMT Material Plus: Fundamental depth, foundational breadth Pathophysiology, assessment, and management of • Vascular injury • Solid and hollow organs injuries • Blunt versus penetrating mechanisms • Evisceration • Retroperitoneal injuries • Injuries to the external genitalia • Vaginal bleeding due to trauma • Sexual assault	AEMT Material Plus: Complex depth, comprehensive breadth Pathophysiology, assessment, and management of • Vascular injury • Solid and hollow organ injuries • Blunt versus penetrating mechanisms • Evisceration • Retroperitoneal injuries • Injuries to the external genitalia

Paramedic	AEMT Material Plus: Pathophysiology, assessment, and management of Fundamental depth, foundational breadth • Pediatric fractures • Tendon laceration/ transection/ rupture (Achilles and patellar) • Complex depth, foundational breadth • Upper and lower extremity orthopedic trauma • Open fractures • Closed fractures
AEMT	EMT Material Plus: Pathophysiology, assessment, and management of Simple depth, simple breadth Compartment syndrome Complex depth, foundational breadth Pelvic fractures Amputations/replantation
EMT	EMR Material Plus: Pathophysiology, assessment, and management of Fundamental depth, foundational breadth  • Upper and lower extremity orthopedic trauma  • Open fractures  • Closed fractures  • Dislocations  • Sprains/strains  • Pelvic fractures  • Amputations/replantation
EMR	Simple depth, simple breadth Recognition and management of Open fractures Closed fractures Dislocations Amputations
	Orthopedic Trauma

T Paramedic	simple Complex depth, comprehensive breadth Pathophysiology, assessment, and management of  • Wounds  • Avulsions  • Burns  • Burns  • Chemical  • Chemical  • Chemical  • Chemical  • Chemical  • Chemical  • Chemical
AEMI	EMT Material Plus: Fundamental depth, simple breadth  Crush syndrome
EMT	EMR Material Plus: foundational breadth Pathophysiology, assessment, and management  • Wounds  ○ Avulsions  ○ Lacerations  ○ Incisions  • Burns  ○ Electrical  ○ Chemical  ○ Chemical  ○ Thermal  ○ Thermal
EMR	Simple depth, simple breadth Recognition and management of  • Wounds  • Burns  • Chemical  • Chemical  • Chemicals in the eye and on the skin
	Soft Tissue Trauma

		Clinical Behavior/Judgment	udgment	
	EMR	EMT	AEMT	Paramedic
Assessment	Perform a simple assessment to identify life threats, identify injuries requiring immobilization and conditions requiring treatment within the scope of practice of the EMR: including foreign substance in the eyes and nerve agent poisoning.	Perform a basic history and physical examination to identify acute complaints and monitor changes.  Identify the actual and potential complaints of emergency patients.	Perform a basic history and physical examination to identify acute complaints and monitor changes.  Identify the actual and potential complaints of emergency patients.	Perform a comprehensive history and physical examination to identify factors affecting the health and health needs of a patient.  Formulate a field impression based on an analysis of comprehensive assessment findings, anatomy, physiology, pathophysiology, and epidemiology.  Relate assessment findings to underlying pathological and physiological changes in the patient's condition.  Integrate and synthesize the multiple determinants of health and clinical care.  Perform health screening and referrals.
Therapeutic communication and cultural competency	Communicates to obtain and clearly transmit information with an awareness of cultural differences.	Communicate in a culturally sensitive manner.	Communicate in a culturally sensitive manner.	Effectively communicate in a manner that is culturally sensitive and intended to improve the patient outcome.

	Paramedic	Safely and effectively perform all psychomotor skills within the National EMS Scope of Practice Model AND state Scope of Practice Model AND state Scope of Practice at this level.  Airway and Breathing  • Oral and nasal endotracheal intubation  • FBAO – direct larymgoscopy  • Percutaneous cricothyrotomy  • Pleural decompression  • BiPAP, CPAP, PEEP  • Chest tube monitoring  • FTCO2 monitoring  • FTCO2 monitoring  • TCO3 monitoring  • NG/OG tube  Assessment  • ETCO2 monitoring  • TCO3 monitoring  • NG/OG tube  Assessment  • ETCO2 monitoring  • Thereal and parenteral  administration of approved prescription medications  • Intraosseous insertion  • Maintain infusion of blood or blood sampling  • Thrombolytic initiation  • Administer physician approved medications  hedical/Cardiac care  • Cardioversion

The National EMS Education Agenda for the Future: A Systems Approach calls for national accreditation of Paramedic programs. CoAEMSP is currently the only national agency that offers EMS paramedic education program accreditation; it is used or recognized by most States. While the CoAEMSP Standards and Guidelines are adopted for the Education Infrastructure section, this does not itself require the program to be CoAEMSP accredited. Recognition of national accreditation is the responsibility of each State.

### **Instructional Guidelines**

The Standards are broad to allow for incorporation of evidence-based changes within the profession as they influence practice and to permit diverse presentation methods. The Instructional Guidelines (IG) are not part of the National EMS Education Standards, but are a companion document. The IG are intended to provide guidance to instructors, regulators, and publishers regarding the content that may be included within each area of the Standards, and to provide interim support as EMS instructors and programs transition from the NSC to the National EMS Education Standards. The IG are not intended to be all-inclusive; it is understood that they will become outdated as research, technology, and national organization guidelines dictate changes in patient assessment and care. The IG do not comprise a curriculum and are not intended to be adopted by States.

## **Glossary for Education Standards**

**Academic institution -** A body or establishment instituted for an educational purpose that provides college credit or awards degrees.

**Accreditation** - The granting of approval by an official review board after meeting specific requirements. The review board is nongovernmental, and the review is collegial and based on self-assessment, peer assessment, and judgment. The purpose of accreditation is student protection and public accountability.

**Advanced-level care** - Care that has greater potential benefit to the patient, but also greater potential risk to the patient if improperly or inappropriately performed. It is more difficult to attain and maintain competency in, and requires significant background knowledge in basic and applied sciences. This level of care includes invasive and pharmacological interventions.

**Affective domain -** Describes learning in terms of feelings/emotions, attitudes, and values. (NAEMSE, 2005, p. 306)

**Asynchronous instruction/learning -** An instructional method that allows the learner to use a self directed and self-paced learning format to move through the content of the course. In this type of instruction, learner-to-learner and learner-to-instructor interactions are independent of time and place. Communications and submission of work typically follow a schedule while learners and instructors do not interact at the same time.

**Certification** - The issuing of a certificate by a private agency based upon competency standards adopted by that agency and met by the individual.

**Cognitive domain -** Describes learning that takes place through the process of thinking—it deals with facts and knowledge. (NAEMSE, 2005, p. 306)

**Competency** - Expected behavior or knowledge to be achieved within a defined area of practice.

**Credential -** Generic term referring to all forms of professional qualification.

Credentialing - The umbrella term that includes the concepts of accreditation, licensure, registration, and professional certification. Credentialing can establish criteria for fairness, quality, competence, and/or safety for professional services provided by authorized individuals, for products, or for educational endeavors. Credentialing is the process by which an entity, authorized and qualified to do so, grants formal recognition to, or records the recognition status of individuals, organizations, institutions, programs, processes, services, or products that meet predetermined and standardized criteria. (NOCA, 2006)

**Credentialing agency** - An organization that certifies an institution's or individual's authority or claim of competence in a course of study or completion of objectives.

**Curriculum** - A particular course of study, often in a specialized field. For EMS education, it has traditionally included detailed lesson plans.

**Didactic -** The instructional theory, the lesson content. (NAEMSE, 2005, p. 307)

**Distributive education** - A generic term used to describe a variety of learning delivery methods that attempt to accommodate a geographical separation (at least for some of the time) of the instructor and learners. Distributed education includes computer and web-based instruction, distance learning through television or video, web-based seminars, video conferencing, and electronic and traditional educational models.

**Domains** - A category of learning. (See Affective domain, Cognitive domain, and Psychomotor domain.) (NAEMSE, 2005, p. 307)

**Entry-level competence** - The level of competence expected of an individual who is about to begin a career. The minimum competence necessary to practice safely and effectively.

**Health Screening** - A test or exam performed to find a condition before symptoms begin. Screening tests may help find diseases or conditions early, when they may be easier to treat. (Medline Plus definition)

**Instructional Guidelines** - A resource document that provides initial guidance for content within the *National EMS Education Standards*—it is not a curriculum and <u>should not</u> be adopted by States.

Licensure - The act of granting an entity permission to do something that the entity could not legally do without such permission. Licensing is generally viewed by legislative bodies as a regulatory effort to protect the public from potential harm. In the health care delivery system, an individual who is licensed tends to enjoy a certain amount of autonomy in delivering health care services. Conversely, the licensed individual must satisfy ongoing requirements that ensure certain minimum levels of expertise. A license is generally considered a privilege, not a right.

**Medical oversight -** Physician review and approval of clinical content and matters relevant to medical authority.

National EMS Core Content - The document that defines the domain of out-of-hospital care.

**National EMS Education Program Accreditation -** The accreditation process for institutions that sponsor EMS educational programs.

National EMS Education Standards - The document that defines the terminal objectives for each licensure level.

**National EMS Scope of Practice Model** - The document that defines the scope of practice of the various levels of EMS licensure.

**Patient simulation** - An alternative to a human patient to help students improve patient assessment and management skills; a high fidelity patient simulator provides realistic simulation that responds physiologically to student therapies. These simulators have realistic features such as chests that rise and fall with respirations, pupils that react to light, pulses that can be palpated, etc

**Post graduate internship and/or experience** - Experience gained after the student has completed and graduated from school.

**Practice analysis** - A study conducted to determine the frequency and criticality of the tasks performed in practice.

**Preceptor -** A clinical teacher or instructor who is responsible for evaluating and ensuring student progress during hospital and field experiences. This individual typically has training to be able to function effectively in the role.

**Primary instructor** - A person who possesses the appropriate academic and/or allied health credentials, and understanding of the principles and theories of education, and required instructional experience necessary to provide quality instruction to students. (NAEMSE, 2005, p 309)

**Program director -** The individual responsible for an educational program or programs.

**Psychomotor domain** - Describes learning that takes place through the attainment of skills and bodily, or kinesthetic, movements. (NAEMSE, 2005, p309

**Registration agency** - An agency that is traditionally responsible for providing a product used to evaluate a chosen area. States may voluntarily adopt this product as part of their licensing process. The registration agency is also responsible for gathering and housing data to support the validity and reliability of their product.

**Regulation** - A rule or a statue that prescribes the management, governance, or operation parameters for a given group; tends to be a function of administrative agencies to which a legislative body has delegated authority to promulgate rules and regulations to "regulate a given industry or profession." Most regulations are intended to protect the public health, safety, and welfare.

**Scope of practice -** The description of what a licensed individual legally can and cannot perform.

**Standardized patient** - An individual who has been thoroughly trained to accurately simulate a real patient with a medical condition; a standardized patient plays the role of a patient for students learning patient assessment, history taking skills, communication skills, and other skills.

**Standard of care** - The domain of acceptable practice, as defined by scope of practice, current evidence, industry consensus, and experts. Standard of care can vary, depending on the independent variables of each situation.

**Synchronous instruction** - Instructional method whereby learners and instructors interact at the same time, either in the classroom or via a computer driven course. This method allows for more immediate learner guidance and feedback using face-to-face, instant text-based messaging, or real time voice communications.

**Team leader** - Someone who leads the call and provides guidance and direction for setting priorities, scene and patient assessment and management. The team leader may not actually perform all the interventions, but may assign others to do so.
