Questions submitted by potential offerors and answers from the state:

Question:

Could you please explain how the fee is determined for each project assigned? Is it based on our approved hourly rate times the number of hours we anticipate converting provided the information into Revit, or based on the size of the existing building to be modeled?

Answer:

The hourly rate should be used to determine how long it will take to develop a Revit Model utilizing the square footage of the facility as a base for time to complete the model. So in most instances a Revit model for a 1000 square foot facility will take less time to develop than a 10000 square foot model. The contractor should utilize their existing knowledge of how long it has taken them to develop Revit models based on building square footage for past projects to determine a timeline of how many hours it will take for them to complete the project.
