KRKSSO CAP	5 AAC 21.382	RC183	Creates a Kenai River late-run king salmon stock of concern management plan. Within the plan are management guidelines, purpose statements and effective dates. The plan includes sport, commercial and personal use regulations. A recovery goal of 14,250 - 30,000 king salmon 75 cm mid eye to tail fork and longer king salmon is established and the plan is effective from June 20 through August 15. Sport and commercial fishing regulations are no longer paired. Allows for the use of dip nets as an alternative gear type for holders of a SO4H commercial set gillnet CFEC permit. Requires all commercially harvested king salmon to be delivered to a licensed processor. Will be effective until the recommendation by the department for delisting is adopted by the BOF based on specified criteria.	3/1 at 12:31pm	KRKSSOCAP-Kenai River King Salmon Stock of Concern Action Plan
