Questions submitted by potential offerors and answers from the state:

Question 1: Would you like to include the full sweep of the PFAS for this round or are you just strictly concerned about the contamination of the Underground Storage Tank (UST)?

Answer: Historically, we would include PFAS however; currently there is a separate investigation taking place right now. PFAS will be excluded, and the successful Contractor will move forward with findings.

Question 2: It was mentioned that GPR being the method for our geophysical surveys. Can we use other mechanisms like EM31?

Answer: The division is most familiar with GPR, however if you have other suggested method(s) that would be most advantageous in this situation, you are encouraged to disclose that in your proposal, and it may be discussed further with the selected Contractor.
