

as an option this phenolic panel infill could be a continuation of the blue tile pattern. would you prefer this option or leave the bronze-look?

9" HIGH X 4" THICK PLEXIGLASS LETTERS, WITH A THIN FACING OF GOLD-COLORED ANODIZED ALUMINUM.

- PLEXIGLASS IS BACK LIT W/ LEDS
- LETTERS ARE MOUNTED ON A 3" HIGH X 2" THICK DARK BRONZE ANODIZED ALUMINUM BAR THAT IS USED TO RUN THE ELECTRICAL AND AVOID THE MANY WALL PENETRATIONS THAT WOULD BE REQUIRED IF EACH LETTER WAS FED W/ POWER SEPARATELY

DARK BRONZE LOOK PHENOLIC PANELS OVER NEW STUD WALL INFILL (NO MORE GLAZING HERE)

ANOTHER OPTION IS TO MAKE THIS A PART OF THE TILE WALL. THIS WAS DISCUSSED AS AN OPTION AFTER IT WAS DECIDED TO INFILL THIS AREA, BUT WAS NEVER PRESENTED TO ACS. IT WOULD MAKE THE ENTIRE ENTRY AREA EITHER GLAZED CURTAIN WALL/ENTRY OR TILED (SO ONE LESS FINISH COLOR)
